Cryptocurrency is decentralized money or digital assets that's based on blockchain. A digital asset is anything that exists in a digital format and comes with the right to use. A Cryptocurrency is a medium of exchange that is digital. There is no central authority that manages and maintains the value of a cryptocurrency. Instead, these tasks are broadly distributed among cryptocurrency users via the internet. You can use crypto to buy regular goods and services, although most people invest in cryptocurrencies as they would in other assets, like stocks or precious metals.

You may use crypto as an alternative investment option outside of stocks and bonds. Some people even refer to it as "digital gold".

Cryptocurrency can be purchased on peer-to-peer networks and cryptocurrency exchanges. Crypto is a highly speculative investment. We always suggested to investors about what percentage of their portfolio they're willing to lose if the investment goes south. It could be 1% to 5%, it could be 10%. It depends on how much they have now, and what's really at stake for them, from a loss perspective. Cryptocurrency is a novel and exciting asset class, purchasing it can be risky as you must take on a fair amount of research to fully understand how each system works.

Cryptocurrency is a digital asset. A cryptocurrency is infinite in number and at times equated to precious metals like gold and silver. Cryptocurrency is created through mining, which is a process of very complex problems being solved by powerful computers. Many cryptocurrencies use blockchain for managing and recording transactions, wherein multiple entities maintain identical transaction records, making it an extremely secure technology for your investment. The total worth of the cryptocurrency market as of May 2021 is a whopping \$1.7 trillion. Bitcoin has the largest share in terms of market capitalisation followed by Ethereum.

Bitcoin emerged as a gold rush of opportunity when the world realised problems with the existing financial systems after the 2008 crisis. In 2013, Bitcoin was recommended as the best investment by Forbes. Peer to Peer (P2P), which means it involves no intermediary cost.

With cryptocurrency, the Future is here. To start investing in CRYPCON ICO.

Gold has gone from 0 to \$1850 in 5000 years.

Bitcoin has gone from 0 to \$57000 in 10 years.

We have elected to put our money and faith in a mathematical framework that is free of politics and human error.

Cryptocurrency is the biggest opportunity set we can think of over the next decade.

The earliest adopters at scale of crypto were gamers.

You can't stop things like Bitcoin. It will be everywhere and the world will have to readjust.

World governments will have to readjust.

Blockchain Technology could change our world more than people imagine.

Bitcoin is exciting to me because it shows how cheap transactions can be.

Bitcoin is a remarkable cryptographic achievement and the ability to create something that is not duplicable in the digital world has enormous value.

Learning how cryptocurrency works is like learning a new language. It is incredibly difficult at the beginning, but once it clicks it will stick with you forever.

The more you know little about so many things in life. Keep learning more and more.

Technical development and social changes have always been the driving force of human evolution.

If the cryptocurrency market overall or a digital asset is solving a problem, it's going to drive some value.

Blockchain is the tech. Bitcoin is merely the first mainstream manifestation of its potential.

Bitcoin, Ethereum will do to banks what email did to the postal industry.

There are 3 eras of currency: commodity based, political based, and now math based.

Cryptocurrency has left its footprint in the financial world. More and more people adopt it, praise it and invest in it.

Disclaimer: Investment in crypto assets is subject to volatility, market and other risks, please do your own research before investing.

Purpose of cryptocurrency as indicated by currency they were originally intended to be used in the same way as rupees and dollars are, as a medium of payment between people for products and services purchased.

Co-sider store reward cards as an alternative physical payment method that is denominated in their own units, and not in national currency. Similarly, cryptocurrency with its own units was meant to enable easy digital transactions online, at lower costs than what conventional banks charged.

Supply and demand work in the cryptocurrencies like Bitcoin and Ether are designed to have a limited supply. By comparison, real-world currencies like the US Dollar do not have a hard limit on supply. When demand increases, the value of a supply limited item is expected to increase. That difference in supply, a high demand for crypto and new ways to profit from rising crypto, have led to a self-perpetuating cycle that drives up the exchange value of major cryptocurrencies. Fundamentally, a seller sells their currency to gain cash and a buyer buys expecting to hold the currency until its value increases in dollar/rupee terms.

People with a lot of faith in the future of cryptocurrencies subscribe to a HODL mindset, meaning Hold On For Dear Life to the roller coaster they expect to ride. They buy and do not intend to sell anytime soon, even claiming that the value of one Bitcoin could rise from \$50000 today to \$288000 in a few years. Others choose the day trading route, buy a currency, target a profit percentage as low as 2% and sell as soon as that target is reached-sometimes within hours. For beginners in the crypto market, experts advise investing only as much money as you're willing to lose. The reason is, crypto trading marries the irrational exuberance potential of a conventional stock market to the regulatory uncertainty of crypto.

There are three things to be aware of when one is ready to take profits on investment. Like all business, trading in crypto has additional expenses to keep in mind.

First of all, exchange transaction fees that apply to all actions between infusing cash and exiting investments at a profit.

Secondly, unexpected movements in price could mean holding onto crypto for longer than initially expected.

Thirdly, taxes that fall due at the end of the year. Depending on the income tax bracket, people may have differing minimum profit targets. Frequently forgotten until the end of the financial year.

Keeping this factor in mind could help one enjoy their gains in moderation.

Cryptocurrency is decentralized technology, spread across many computers, that records every transaction. Blockchain is the technology that allows for cryptocurrencies to work. It is a decentralized and digital ledger of transactions used for cryptocurrencies and other assets/ functions. It is important to separate the technology behind cryptocurrencies from the actual cryptocurrencies.

Crypto- umbrella term for all digital and/ or virtual currencies.

Coins- Generally, any cryptocurrency that has its own separate blockchain.

Tokens- Generally, any cryptocurrency that is built on top of existing blockchain, e.g., some companies issue their own cryptocurrencies, called tokens, which can be used to purchase goods or services specifically from the issuing company.

ICO- Short for initial coin offering, this is analogous to a privately held company going public via an initial public offering (IPO)- a way to raise funds for a new cryptocurrency or expand services for existing coins.

People saw the success of Bitcoin and tried to improve existing functionality and provide new functionality with new cryptocurrencies.

Additionally, investors and developers were certainly trying to make money.

All new technologies pose risks. Understand your risk-reward acceptance level. There is no such thing as a risk- free asset. Understand those risks properly and only if you are comfortable with those, take the plunge.

Cryptocurrency investors in India will have to pay tax under the new scheme for Taxation of Virtual Digital Assets from April 1. The Union Budget 2022-23 brought in clarity pertaining to the levy of income tax on crypto assets.

Financial Minister Nirmala Sitharaman in the Union Budget 2022 announced that "any income from transfer of any virtual digital asset shall be taxed at the rate of 30 per cent."

Finance Minister Nirmala Sitharaman, in her Budget speech, announced a 30% flat tax on crypto income or digital asset investments. Later the government has also clarified that the investors cannot offset losses in one trade against gains in another.

Along with the capital gains charge, the finance ministry had also announced a 1% tax deductible at source, or TDS, on all digital-asset transfers above a certain size, starting July 1.

Under the new regime, the buyer of a crypto asset must deduct the 1% TDS on behalf of the seller if a transaction exceeds ₹10,000. Smaller trades would also be taxed if they top a cumulative ₹50,000 in a financial year.
